Just because your child is off from school, that doesn't mean learning needs to take a break too! The Meadowlands Environment Center is offering Vacation Day programs to children in grades 1 through 5. Age appropriate, hands-on activities will be offered to encourage exploration, learning, and discovery to make sure your child is getting the most out of their day off from school. Designed to meet the needs of working parents, Vacation Day camps are offered from 7:30am until 5:30pm. Space is limited and pre-registration required.

Adventure Options

Habitat Hunters Grades 1 – 3

Description:

Fantastic stories have long been told of dark, soggy places where hungry monsters with gnashing teeth dwell. Though such places do exist there aren't any monsters living in them. So what does? As a habitat hunter in our vacation day camp, you'll find out firsthand. Each stand-alone day will involve new and exciting investigations, from experiments with exotic soils and the animals that live in them, to explorations of the aquatic world including an up-close look at live fish, turtles, and other animals that inhabit the Meadowlands. Each day will include a practical take-home craft you can use to explore the various habitats of the Meadowlands and around your home.

Environmental Explorers Grades 4 – 5

Description:

Each day of this day camp will focus on a different natural science topic, such as astronomy, water, plants, or animals. There will be hands-on lessons, games, and themed arts & crafts that are all content-based and correlated to the same standards adhered to in schools. Weather permitting, we will try to include some time outside every day, so please dress appropriately.

Note: Each day is different so any child participating on more than one day will not repeat a program. Come to one; come to all!
